

ABSTRACT

Printing over a network, such as the Internet, by uploading, via the network, to a printing service provider, print data information and location information, determining identification information based on the uploaded location information, correlating, at the printing service provider, the determined identification information with the uploaded print data information, inputting the identification information at a printing device connected to the network, transmitting the print data information having the correlated identification information to the printing device, and printing the print data information on the printing device. The location information may be a network address from which the uploading step is initiated, where the network address is dynamically determined by a hotel server when a user connects a computing device to a network connection in the hotel. After the uploading step, the printing service provider may query the hotel server for the identification information, with the hotel server determining the identification and transmitting the identification information to the printing service provider in response. The location information may comprise hotel information and the identification information may comprise hotel room key information or credit card information.
